: ≱	
ខ	The present sequence represents a human angiogenesis-associated protein
ខ	which is able to bind an N-terminal fragment of plasminogen. The protei
ខ	is designated ABP-1, and binds the first 4 kringle domains (K1-K4) and/or
S	kringle 5 (KS) of plasminogen. These four kringle domains comprise
ပ္ပ	
ប្ដ	angiostatin-binding domain of the ABP-1 protein is described in AAY54054
Ü	A RO GESCTIONE IN ARISHUSS ABE-I

diseases or disorders, such as tumor conditions, diabetes, rheumatoid arthritis, and even some inflammatory diseases such as psoriasis, chronic inflammation of the intestine, asthma, etc. The protein may also be able to treat and cure, or prevent, obesity. The ABP-1 DNA can be used in gene therapy techniques

New GGDD polypeptides, useful for diagnosing, preventing, and treating disorders associated with an abnormal expression or activity of GGDD, e.g. neuromuscular, immunological, cardiovascular disorders, cancer and/or infections.

Claim 1; Page 220-222; 299pp; English.

The present invention relates to novel cell growth, differentiation and death (CGDD) proteins and polynucleotides encoding them. The sequences of the invention are useful in diagnosing, preventing and treating disorders associated with an abnormal expression or activity of CGDD such as neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), mencular disorders (e.g. quichetes, Grave's disease), cancers (e.g. diabetes, Grave's disease), cancers (e.g. diabetes, Grave's disease), cancers (e.g. diabetes, Grave's disease), cancers (e.g. disorders (e.g. crohn's disease), remaindedisciplination of sorders (e.g. disorders (e.g. diabetes), candiovascular disorders (e.g. datastinal disorders (e.g. diabetes), candiovascular disorders (e.g. datastic), protozoal, helminthic), cardiovascular disorders (e.g. datastic), cand hepatic diseases (e.g. cirrhosis). The polynucleotides can be used to create humanised animals or transgenic animals to model human diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         540
                                                                                                                                                                                                                                                                                                      The present sequence represents a polymorphic variant of a human angiogenesis-associated protein which is able to bind an N-terminal tragment of plasminogen. The native protein, described in AMYSHOS2, is designated ABP-1, and binds the first 4 kringle domains comprise kringle 5 (K5) of plasminogen. These four kringle domains comprise angiostatin. The ABP-1 protein acts as a receptor for plasminogen. The angiostatin-binding domain of the ABP-1 protein is described in AAVS4054. ABP-1 can be used to manufacture medicaments for treating angiogenesis related diseases or disorders, such as tumor conditions, diabetes, related diseases or disorders, such as tumor diseases such as psoriasis, chronic inflammation of the intestine, asthma, etc. The protein may also be able to treat and cure, or prevent, obesity. The ABP-1 DNA can be used in gene therapy techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

Sequence 479

New polynucleotides comprising sequences assembled from expressed

sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or platelet or coagulation disorders.

English. ID NO 1132; 1012pp + Sequence Listing; The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ1056) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP66902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Albreimer's diseases (multiple sclerosis, diabetes, lupus) genetic disorders, well or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or iung fibrosis, infections (Dacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did out form part of the princed specification, but was obtained in electronic format directly from WIPO at fig.whpo.int/published_pot_sequences

the invention. The polypeptides and their associated polymucleotides can be used in the treatment, prevention and diagnosis of diseases associated with inappropriate secretory protein expression. These diseases include cell proliferative disorders such as atherosclerosis and psoriasis, cancers such as leukaemia and melanoma, immune system disorders such as atherosclerosis and psoriasis, cancers such as leukaemia and melanoma, immune system disorders such as schizophrenia and seasonal affective disorder (SAD), motor neuron disorders such as amyotrophic lateral sclerosis, demyelinating disorders such as multiple sclerosis, central nervous system disorders complementary to the target polymucleotide, under conditions in which a phybridisation complex, is formed, and detecting the presence or absence of the complex. The polymptides may also be used as antigens in the production of antibodies protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the sequences of the invention in samples e.g. by enzyme linked immunosorbent assay (ELISA)

New isolated nucleic acid molecule encoding a human angiomotin-like protein, useful for treating or preventing a disorder associated with decreased or increased expression or activity of AMLP1.

Example 2; SEQ ID NO 867; 172pp; English

The present invention describes the human angiomotin-like protein 1 (AMLP1), human AMLP1 has cytostatic activity, and can be used in gene therapy. The AMLP1 protein, nucleic actid molecules, antibodies, and compositions of the present invention can be used for treating or preventing a disorder associated with decreased or increased expression or activity of AMLP1. The present sequence represents a myosin-tail motif amino acid sequence, which is used in an example from the present

The present sequence is the protein sequence for murine Junction-Enriched and Associated Protein (JEAP). JEAP is expressed specifically at tight junctions in exocrine glands such as the pencreas, submandibular gland, lacrimal gland, parotid gland sublingual gland. JEAP is useful for identifying substances which affect its expression, activity or

Ono Y, Morimoto K, Takeuchi M, Inoue Y; Asano M, Nishimura M, Asar Imai T, Takai Y;

2003-571281/54. N-PSDB; ACC70743. New junction-enriched and associated protein 2 which is expressed specifically at tright junctions in exocrine glands, useful for identifying substances which affect the expression, activity or distribution of the protein.

Claim 1; Page 20-22; 31pp; English.

The present sequence is the protein sequence for murine Junction-Enriched and Associated Protein-2 (JEAP-2). JEAP-2 is expressed specifically at tight junctions in exorrine glands such as the pancreas, submandibular gland and lactimal gland. JEAP-2 is useful for identifying substances which affect its expression, activity or distribution

× Novel nucleic acids and peptides derived from open reading frame useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease.

Claim 11; Page 2453-2455; 5507pp; English.

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepacotropic; vulnerary; antiparatial antiparatiansonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiparthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antilinflabetic; impunosuppressive; antilinflabetic; hypotensive; cardiant; thrombolytic; cadgulant; vasotropic; antidabetic; hypotensive; cardiant; thrombolytic; antithyroid; and antianaemic. The cardiant; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OREX-associated disorder. The nucleic acids can be used to express OREX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, national energy cardiavascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester chicage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cardiary and antinidate damage, noctural hemoglopinuria, antinidamatory disease; to emhance coagulation; to inhibit thrombosis; and as a contraceptive S

multiple New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. diabetes, sclerosis, atherosclerosis, cancer, infections, osteoporosis or Parkinson's disease.

Claim 1; Page 148-149; 266pp; English.

The present invention relates to a new polypeptide (NOVX). The NOVX polypeptide, nucleic acid and antibody are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, conference of sociated diseases. The NOVX nucleic acids, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as cancers, Hodgkin disease, Von Hippel-Lindau syndrome, Alzheimer's disease, thurtington's disease, cerebral hypercalcaemia, Parkinson's disease, Huntington's disease, cerebral palsy, Lesch-Nyhman syndrome, multiple sclerosis, ataxia—telangisctaemia, leukodystrophies, addiction, anxiety, depression, pain, obesity, Crohn's disease, osteoporosis, inflammatory bowel disease, infertility, inflammatory bowel disease, athersoclerosis, hypertension, celeroderma, heemophilia diabetes, pancreatitis, autoimmune disease, asthma, arthritis, immunodeficiencise, HIV, viral, bacterial or parasitic nifertiling, and see used as targets for the identification of small colles that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and amplement modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and immunospecifically to NOVX substances for use in therapoutic or diagnostic methods: The nucleic acids are further used as hybridisation pharmacogenomics. The present amino acid sequence represents a human NOVX protein of the invention

The present invention describes primer sets for synthesising 5602 full-

[ leigth cDNAs defined in the specification. Where a primer set comprises:

[ (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide which comprises a 1'-end sequence. Oscaplementary to a polynucleotide which comprises a 1'-end sequence, where the oligonucleotide which comprises a 1'-end sequence. Oscaplementary to a polynucleotide which comprises a 1'-end sequence, where the opinion of the primer sets can be used in antisense therapy and in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the pertent and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the comprise as a saily without any specialised methods. AAH13612 tepresent thuman amino acid sequences; and AAH13622 to AAH13612 represent thuman amino acid sequences; and AAH13622 to persente the complement the exemplification of the company in the exemplification of the company is made to the company of the company in the exemplification of the company in the exemplification of the company is made to the company in the company in the company is made to the company in the company in the company is made to the company in the company in the company is made to the company in the compa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     648
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    415

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) as useful in gene therapy techniques to restore normal activity of (II) are to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbrrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Aggionio-Aggiogna represent novel human diagnostic mainto acid sequences. Aggionio-Aggiogna, represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at five specification, but was obtained in fip. wipo int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 SEDTRKTISQLFAKNKESQREKEKLEAELATARSTNEDQRRHIEIRDQALSNAQAKVVKL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes the human angiomotin-like protein I (AMLPI). human AMLPI has cytostatic activity, and can be used in gene therapy. The AMLPI protein, nucleic acid molecules, antibodies, and compositions of the present invention can be used for treating or preventing a disorder associated with decreased or increased expression or activity of AMLPI. The present sequence represents human AMLPIb from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2 PRAQPSSASYQPVPADPPAIVSRAQQMVBILSDBNRNLRQBLEGCYEKVARLQKVBTBIQ

Patent No. 559919
GENERAL INFORMATION:
APPLICANT: YEN, TIMOTHY J.
APPLICANT: RATTUER, JEROME B.
TITLE OF INVENTION: NUCLEIC ACID ENCODING A
TITLE OF INVENTION: TRANSIENTLY-EXPRESSED KINETOCHORE PROTEIN,
TITLE OF INVENTION: AND METHODS OF USE
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
                                                                          ----PRPTAWPDK 285

Garden M.J.; Submitted (MRR-1994) to the EMBL/GenBank/DDBJ databases. Submitted (MRR-1994) to the EMBL/GenBank/DDBJ databases. Submitted (MRR-1994) to the BMBL/GenBank three intermediate filament proteins: L, M, and H which are involved in the maintenance of neuronal caliber. NP-H has an important function in mature axons that is not subserved by the two smaller NF proteins. -I- PTM: There are a number of repeats of the tripeptide K.S-P, NFH is phosphorylated on a muber of the serines in this motif. It is thought that phosphorylation of NFH results in the formation of interfilament cross bridges that are important in the maintenance of axonal calibber. -I- PTM: Phosphorylation being altered developmentally and ochnoident with a change in the neurofilament function. -I- SIMILARITY: Belongs to the intermediate filament family. -I- CAUTION: Ref.2 sequence differs from that shown in positions 534 -I- CAUTION: Ref.2 sequence differs from that shown in positions 534 -I- CAUTION: Ref.2 sequence differs from that shown in positions 534 -I- CAUTION: Ref.2 sequence differs from that shown in positions 534 -I- CAUTION: Ref.2 sequence differs from that shown in positions 534 -I- CAUTION: Ref.2 sequence differs from that shown in positions 534 -I- CAUTION: Ref.2 sequence differs from that shown in positions 534 -I- CAUTION: Ref.2 sequence differs from that shown in positions on its between the Swiss Institute of Bioinformatics and the EMBL outstation the Buropean Bioinformatics Institute. There are no restrictions on its modified and this statement is not removed. Usage by and for commercial

                       adult stages.

DOMAIN: The molecule is in a coiled coil structure. The sequence exhibits a prominent seven-residues periodicity.

SIMILARITY: Belongs to the tropomyosin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ^
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ALA/PRO-RICH.

Genes Dev. 1:699-708(1987).

-!- FUNCTION: Neurofilaments usually contain three intermediate
-!- FUNCTION: Neurofilaments usually contain three intermediate
-!- FUNCTION: Neurofilaments usually contain three intermediate
-!- PTM: There are a number of repeats of the tripeptide K-S-P, NFM is
phosphorylated on a number of the serines in this motif. It is
thought that phosphorylation of NFM results in the formation of
interfilament cross bridges that are important in the maintenance
of axonal caliber.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- PTM: Phosphorylation seems to play a major role in the functioning of the larger neurofilament polypeptides (NF-M and NP-H), the levels of phosphorylation being altered developmentally and coincident with a change in the neurofilament function.
                                                                                                                                         Gallus gallus (Chicken).

Nature 466:595-964 (2000).

-i- FUNCTION: THE PERMOTER FOR A CRITICAL ALGINATE BIOSYNTHETIC
GENE, ALGD, ENCODING GDP-MANNOSE DEHYDROGENASE, IS ACTIVATED ONLY
UNDER CONDITIONS REMINISCENT OF THE CYSTIC FIRENOSIS LING (I.E.,
UNDER ONDITIONS REMINISCENT OF THE CYSTIC FIRENOSIS LING (I.E.,
UNDER HIGH OSMOLARITY), AND AT LEAST TWO REGILATORY GENES, ALGP
AND ALGO, HAVE BEEN IMPLICATED IN THIS ACTIVATION PROCESS:
--- DOMAIN: THE CARROXY-TERMINAL BINDS TO DNA. IT IS UNKNOWN WHETHER
BINDING IS SPECIFIC OR NOW-SPECIFIC.
--- SIMILARITY: TO EUKARYOTIC HISTONES HI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN-ATCC 15692 / PAO1;

XII. The complete sequences of 100 new cDNA clones from brain which code for large proteins in vitro."; DNA Res. 5:35-364(1998).

In the res. Of the sequence of the sequence of the coding sequence of neuronal caliber. NF-H has an important function in mature axons that is not subserved by the two smaller NF proteins.

In the series a number of repeats of the tripeptide K.S-P, NFH is phosphorylated on a mumber of the series in this morif. It is thought that phosphorylation of NFH results in the formation of the maintenance of the mai
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             functioning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    coil; Neurone; Phosphorylation; Repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -1- PTM: Phosphorylation seems to play a major role in the functic of the larger neurofilament polypeptides (NF-M and NF-H), the levels of phosphorylation being altered developmentally and coincident with a change in the neurofilament function.
-1- SIMILARITY: Belongs to the intermediate filament family.

subfragment (S2).
SIMILARITY: Contains 1 myosin-like globular head domain.

Pfan, PP01576; Myosin tail; 1. Myosin; Muscle protein; Coiled coil; Thick filament; Actin-binding; ATP-binding; Multigene family.

InterPro, IPR002928; Myosin_tail.

NON TER

DOMAIN

EMBL; X59552; CAA42130.1; -. HSSP; P03437; IHTM.

-i-SUBUNIT: Muscle myosin is a hexameric protein that consists of 2 heavy chain subunits (MHC), 2 alkali light chain subunits (MLC) and 2 regulatory light chain subunits (MLC).
-i-SUBCELULAR LOCATION: Thick filaments of the myofibrils.
-i-TISSUE SPECIFICITY: Ventricular muscle and traces levels in the atrium. Also transfent expression in skeletal muscle during fetal development and regeneration following freeze injury.
-i-DOMAIN: The rodilike tail sequence is highly repetitive, showing cycles of a 28-residue repeat pattern composed of 4 heptapeptides, characteristic for alpha-helical coiled coils.
-i-MISCELLANEOUS: Bach myosin heavy chain can be split into 1 light meromyosin (LMM) and 1 heavy meromyosin (HMM). It can later be split further into 2 globular subfragments (S1) and 1 rod-shaped
